

Proper Seat Installation Guidelines

(Stock Car Application)

NOTE: The primary function of the seat and belt system depends entirely on being properly and securely mounted.

Seat should be mounted to the roll cage or structural member of the frame. It is recommended to use to properly mount bottom (as shown). Seat rails (4) 3/8" Grade-8 bolts, ended flat washers and bolts as far apart as distribute the load.

BUTLERBUILT® mounting rails front and bottom rear of seat should be bolted to seat with heavy duty large hard-lock nuts. Space the possible to properly
